Environmental Product Summary

ErgonoFlex - Point of Care Technology Carts

Design Story: Technology & Environment

ErgonoFlex spent more than two years of collaborative engineering and design development to create our products for the office or home. ErgonoFlex's performance capability combines Sit-to-Stand technology, engineering, and styling.

Environmentally speaking, ErgonoFlex's form was created to minimize material use and mechanical complexities while maximizing ease of adjustability and performance. Our dedication to environmentally responsible product design is reflected in the overall durability and recyclability of the materials used to make our products.

ErgonoFlex's Design Protocol

Our commitment to corporate sustainability naturally includes minimizing the environmental impact of each of our products. Our Product Development Team applies environmentally sensitive design standards to both new and existing ErgonoFlex products.

www.ergonoflex.com

ErgonoFlex goes beyond regulatory compliance to thoroughly evaluate new product designs in three key areas:

- * Material Chemistry & Safety of Inputs - What chemicals are in the materials we specify, and are they the safest available?
- * Disassembly – Can we take products apart at the end of their useful life, to recycle their materials?
- * Recyclability – Do the materials contain recycled content, and more importantly, can the materials be recycled at the end of the product's useful life?

Material Content

ErgonoFlex's components are constructed principally from, aluminum, steel, wood and plastic.

IMPORTANT FACT:

ErgonoFlex's H Class Carts, and all other Sit to Stand Adjustable Tables and Carts are 95 percent recyclable. This means our complete product is 95 percent recyclable.

Delivering technology to the point of care

With our professional experience, ErgonoFlex is uniquely qualified to meet point-of-care needs and with elaborate more than 25 stations to meet each specific need within the hospital. Many Accessories available to up grade the stations.

Advantages:

- * Designed and Devepoed for use in healthcare industry
- * Closed surface
- * Anti-bacteriel powder-coat
- * Liquids cannot penetrate
- * Easy and quick to clean = time-saving = cost saving
- * High quality materials used: Aluminium, die -cast parts and fire-resistant
- * Long-lasting materials
- * No material fatigue
- * Slow-flowing gas spring "StS technology" Sit to Stand for safety reasons
- * StS gas spring does not shoot up quickly when device is removed
- * Easy to move up and down with hand level
- * Lockable at any position just with the hand level
- * All Material recyclable packaging environment-friendly
- * ROHS
- * At site service
- * Custom-designed solutions
- * Completely up gradable
- * Open Architecture
- * Many Accessories up grade available
- * Completely independent of electronics
- * Ultra light for an increased mobility
- * 5 years Warranty

Delivering technology to the point of care

Comfortable, ergonomic, compact data entry either sitting or standing. Unparalleled open architecture provides flexibility for future hardware and accessories upgrades. Superior Aluminium construction help increase accuracy and efficiency—now and when technologies change.
